

PORTABLE DEIONIZATION SERVICE

Are your DI water quality and service expectations being met?

Since 1989, REsys has been a leader in the water purification business. We've built our reputation on reliable customer service and exceptional products. Our customers trust us to understand their application and to provide service commensurate with their critical DI water needs.

Portable Deionization Service:

REsys offers a full range of tank sizes, which may be purchased or rented, to match a variety of applications and financial constraints. Only high quality resins are used, and our ion exchange process is carefully controlled per our in-house developed regeneration procedures. Each tank is methodically tracked through a rigorous quality control process. Water quality, flow, pressure drop and structural integrity are all monitored through our well-documented procedures.

Activated Carbon Tanks:

Service Carbon is an economical and efficient process for removing chlorine, chloramines and dissolved organic contaminants from incoming water supplies. Our portable exchange units contain virgin carbon to assure maximum water quality and service life. Both coal and coconut based carbon is available upon request.

No Fine Print:

We value our customers' time and prefer to limit bureaucracy. You can expect REsys to make order processing easy, and there won't be any hidden fees or unexpected charges. REsys does not require any annual service commitments or lengthy contracts. Our customers should always be free to make the best choice for their deionization service needs.

PORTABLE DI TANK SIZES AND FLOW RATES

SIZE (FT.3)	DIM (IN.)	FLOW (GPM)
.25	6" x 18"	0 to 1
